

IoT Manufacturing Solution

Achieve the promise of Industry 4.0

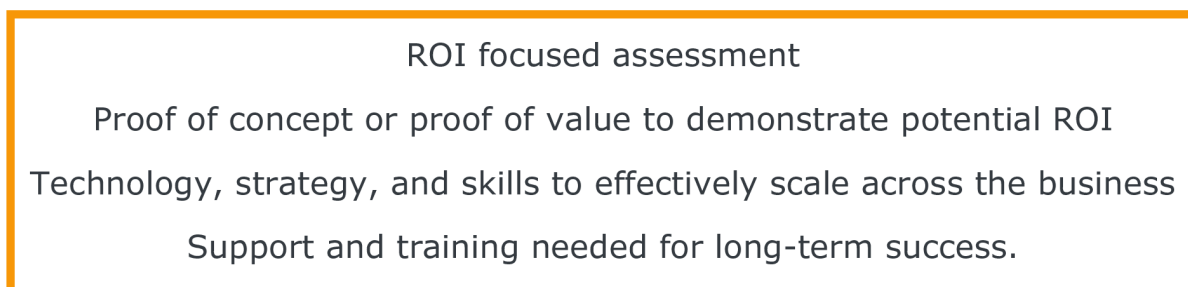

Unlock powerful insights and analytics for your IoT connected devices. For manufacturing facilities, this is the first step in reducing downtime and gaining awareness into operational information from assets on the plant floor

Solution description

This solution is focused on bringing value to the customer by ingesting and visualizing data from IoT connected devices. This is often referred to as the "First Mile Challenge" which consists mainly of instrumentation and ingestion of data from edge devices.

We start off by identifying a use case tied to a strong ROI for the business, and work backwards to design and implement a bespoke solution that incorporates device instrumentation (via sensors), data ingestion and analysis.

The Milvian Group Method

About Milvian Group

Industrial, commercial, and public sector customers seeking to enhance situational awareness of their machinery, assets, and environment turn to Milvian Group for data-driven solutions that improve operational decision-making and costs reductions. As an applied technology company, Milvian Group recommends, integrates, and implements top-tier hardware and cloud-native services, including IoT, data analytics, and AI technologies.

Milvian Group solutions are designed to solve business challenges, improve work conditions, and achieve sustainability goals by increasing uptime, enhancing machine availability, improving safety, and reducing resource consumption. The "Milvian Mark" represents our commitment to setting the gold standard for service and support in the tech industry.
